

 **MATERIA** SPC
STONE BEST RIGID CORE

Perfection in
every detail

why?

EVOLUTION TO EXCELLENCE

1.

WHO WE ARE?

MATERIA is a company dedicated to designing and distributing **innovative floors and walls**.

Our collections are created exclusively by our designers with more than 20 years of experience in floor and wall covering market.

We can recreate the **fine details** and grain found in Natural wood and the patterns and the markings found in any Stone. Not only do we recreate the detail of natural material, we can produce a range of colors. This means our collection runs over a **large variety** of stone and wood textures and colors.

We are based in Onda, Castellón which is at the heart of the ceramic tile industry in Spain.

Our warehouses hold **more than 600.000 m² stock** for immediate delivery of all of your orders.

A well trained back office and sales team ready to answer all your queries.

What MATERIA represents is not just a brand.
We hope to bring everyone endless life inspirations and encourage them to build up their dream house personally.

MATERIA, an ideal choice for a perfect life.

OUR PRODUCTS

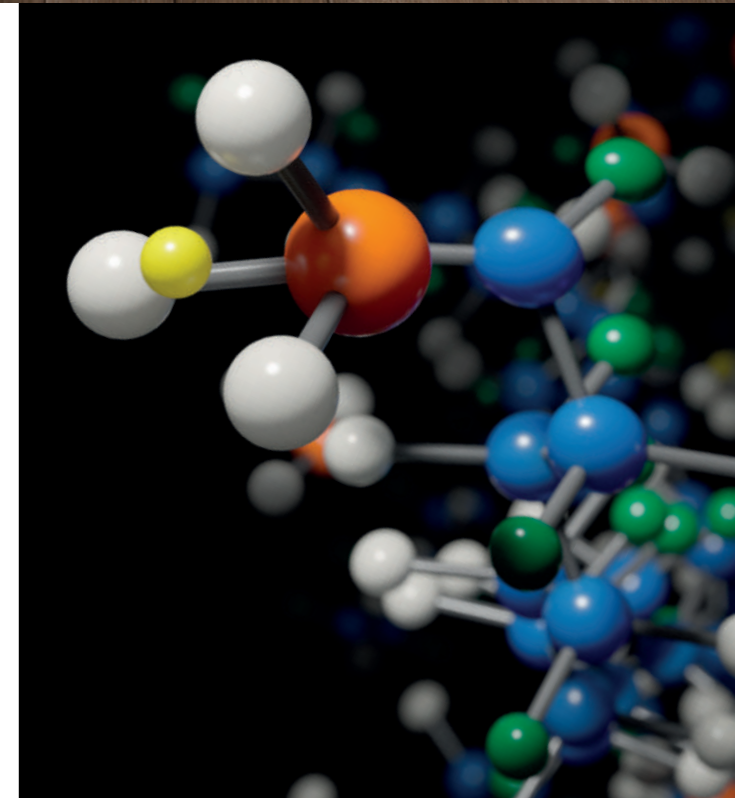

SPC vinyl flooring is one of the **best alternatives** for floors with high traffic, such as hotels or offices, although it is also used in the domestic environment.

NEXT GENERATION OF FLOORS

SPC flooring is considered the “next generation” in vinyl flooring. In addition, unlike wood and laminate floors, they are **100% water resistant**, being much more versatile and suitable for all types of spaces, including wet rooms in the house such as bathrooms and kitchens.

SPC
Acronym for **Solid Polymer Composite**, refers to its composition, which is more rigid than that of traditional vinyl because **its core is made of limestone and stabilizers.**

2.

OUR PRODUCTS

10 FACTS THAT MAKE MATERIASPC FLOORS UNIQUE

1. Quick Instalation

It is simple and quick to install as the material is easily cut to size. It can fit unconventional shapes in rooms easily. There is no need for time consuming and noise cutting of the material to fit into tricky corners.

2. 100% Water Resistent

MATERIASPC is completely water resistant with no swelling or distortion associated with wood or laminated flooring. With his antibacterial properties, its ideal for kitchens, bathrooms and playrooms where spills can be easily wiped away.

3. Great Value

MATERIASPC is a fraction of the cost of natural materials and is easier to transport as it is much lighter. Whats more, it is less prone to damage that requires time consuming repairs, so long terms maintenance cost are minimal. Fiting is also much quicker and more cost effective.

4. Guarantee: 30 Years

All of our SPC is protected by a warranty of at least 30 year for residential installations and 15 years for commercial installations. We have a huge faith in our product which allows you to plan for the future.

5. ECO Friendly

We develop products using ethical and eco-conscious manufacturing technics. It is made from safer, stronger raw materials and it fully recyclable.

6. Easy Maintenance

MATERIASPC ranges are hygienic and easy to clean and maintain. They have antibacterial properties because of the limestone in it. That makes it ideal for hospitals, clinics, dentist, offices, childcare facilities , rental properties and pet care centers. Unlike other flooring types, they don't hold dust, first or pollen. To take care of your floors, simply brush, vacuum or damp mop the area.

7. Inspirational designs

A beautiful assortment of unique wood and stone finishes available across a natural and modern color palette. High resolution imaging present a realistic visual combined with a texture surface for the ultimate real feel.

8. Comfortable

MATERIASPC collections are warm and quiet underfoot and totally compatible with underfloor heating. Natural wood and stone can be noisy and hard on feet (and paws).

9. A great variety of styles and looks

That ´s right, it can mimic any and all types of wood, including different species like pine or teak, as well as most wood floor designs. If you ´re not looking for a wood look, you ´ll be happy to know that **MATERIASPC** collections includes various types of tile and stone floors, too.

10. Its very stable

MATERIASPC products don't react to temperature and humidity changes the way other types of floors do. If you live in an environment that's notorious for high humidity, like Spain, the product offers the look of the best hardwood floors, but in a more stable platform that won't wither away in the excessive moisture.

3.

MATERIASPC ADVANTAGES VERSUS TILE, LAMINATE AND REAL WOOD

Comparative tests carried out against other coatings demonstrate the excellent qualities of our high-quality mineral composite floors, far surpassing vinyl floors manufactured to date.

Undoubtedly, arguments of great weight when deciding the purchase decision over other products.

An unrivaled coating for all types of interiors.

ADVANTAGES VERSUS
TILE, LAMINATE AND REAL WOOD

MATERIASPC FLOORING VS TILE FLOORING

• The Thermal Conductivity

In terms of this aspect, the tile floor is better than the **MATERIASPC** floor. In summer, the tile floor does feel more comfortable. So it's quite reasonable for you to choose, especially when you live in southern cities. But even in summer, the cold floor might make you ill. So, as far as health is concerned, the tile floor might not be the best choice. And good thermal conductivity also means heat loses quickly so that the room will be cold in winter. Relatively, the **MATERIASPC** floor has a better heat-retaining performance, which can keep the room temperature at an appropriate level. So the room will be warm even in spring and winter. If your families like to walk barefoot, the **MATERIASPC** floor is a good choice for you.

• Visual Effect

The color of the tile floor looks and feels relatively cold. If you want your house to look warm and cozy, the **MATERIASPC** floor is a deal choice. If you live with your kids or parents, the **MATERIASPC** floor is highly recommended. As a resilient floor, it has a great impact-resistant performance. The older people and kids are both vulnerable to fall injuries. When they accidentally hit the floor, the backing layer of the floor can act as a buffer.

• Safety

When comparing two types of flooring, safety is always the hot topic, especially the non-slip performance. The wet ceramics tiles can easily cause slip accident, which can be dangerous for children and the old in the house.

MATERIASPC vinyl flooring is super wear-resistance and it has a non-slip surface. Therefore, it avoids slip accident even though the plank is wet. If you have children or old men in the house, **MATERIASPC** flooring would be a safer option.

• Foot Feel

Generally, ceramic tiles feel rigid and cool underfoot, especially in the winter. If you used to walk barefoot in your home, the foot feel may be not as comfortable as **MATERIASPC** flooring. What's more, if you have kids at home, ceramic tiles is not suitable for their movements for the hard surface of tile floor may hurt your kids.

Instead, **MATERIASPC** planks are flexible, offering you softer foot feel and protect your kids. Moreover, **MATERIASPC** planks can keep warmth so you don't worry your feet get cold when you are barefoot inside the house in the winter.

• Patterns

MATERIASPC flooring has a variety of colors and patterns. The vivid print layer can resemble hundreds of different patterns like the wood floor, the carpet, the stone floor, or even the steel! Apart from this, the ingredients of the **MATERIASPC** floor are all green and environment-friendly.

We always think the tile floor is made of natural things, so it must be harmless. But the truth is, the ingredients of the tile floor include potassium minerals like feldspar and mica. These minerals are all radioactive, and their radioactivity won't disappear throughout the manufacturing process. Also, to make the surface feel smoother, some manufacturers will add the radioactive zircon sand during production.

Then how about the wood floor? The solid wood floor is natural and harmless, but the glue is a must in its installation. The composite wood floor can be installed glue-free, but the glue is used in its production. The room decorated with the wood floor will be filled with formaldehyde for at least three months. And no wonder more and more people consider the **MATERIASPC** floor as the best choice since both the tile and wood floors are not 100% healthy and safe to people.

• Installation

Laying tiles requires lots of patience and attention, and the professional way to apply cement to the sub-floor. Generally, tile installation is not DIY friendly, thus you will need to spend extra money and time to finish it.

MATERIASPC flooring is an innovative vinyl plank with the unique click-lock system. You can install **MATERIASPC** plank only yourselves instead of hiring the professional, which helps save your time and money.

• Easy to Clean

There is a common misunderstanding that the tile floor is waterproof, but the SPC floor is not. The main material of the **MATERIASPC** floor is limestone and vinyl resin that doesn't react with water. So, it won't deform.

Also, it won't go moldy by the high humidity. Therefore, to clean the **MATERIASPC** floor is quite simple. The only required tools are water and mop.

• Price

The **MATERIASPC** floor is more affordable than the tile floor and the wood floor. If you want to have a unique decoration style while the budget is limited, the **MATERIASPC** floor is your best choice, is easier to clean than the wood floor and the tile floor and it can save both the money and maintenance work.

GENERATION
OF FLOORS**

3.

ADVANTAGES VERSUS
TILE, LAMINATE AND REAL WOOD

MATERIASPC FLOORING VS LAMINATE FLOORING

MATERIASPC is 100% waterproof!

Laminate flooring is easy to damage if any water gets in between the planks or into the many layers of the product. Because there's natural wood fiber in laminate flooring, it will swell with any moisture. It's far from ideal for bathrooms, kitchens, gyms, spas, salons or any other high-moisture environment.

Both laminate and **MATERIASPC** are lower cost than other high-quality types of flooring, such as finished concrete, carpeting, and ceramic tile. Both work with a lot of existing floorings as the underlayment and are relatively easy to install, even for DIY'ers. But SPC lasts a lot longer than laminate, mostly thanks to its water-resistant properties and resistance to dents and dings. It's much harder to scratch than laminate is.

Because it's so durable and stain-resistant, **MATERIASPC** doesn't require expensive professional cleaning treatments. It's UV-resistant too, so it won't fade like other types of flooring can. All of that adds up to a gorgeous floor for years to come! If replacement planks are needed, they can also be installed easily. Laminate repairs are difficult and may require pulling up a large section of the existing floor.

Whatever
you want to
achieve,
let us help you
create the
perfect
environment
for you.

A PRODUCT THAT HAS IT ALL

4. TECHNICAL ADVANTAGES OF MATERIASPC FLOORING

The incessant search for solutions that improve what is known, the research and development of new, more efficient and sustainable compounds, the application of the latest technologies and the monitoring of design trends, drive us to offer innovative, technologically advanced products, according to the times that we live in, that cover the new needs of the consumer at competitive prices, always complying with the highest quality standards demanded.

Innovation, comfort, design and economy

We are very satisfied with its long-term performance. The results of the tests carried out demonstrate this and thus we pass it on to the consumer, offering them an almost "lifetime" guarantee that very few dare to match.

- Waterproof
- Scratch resistant
- Stain resistant
- Reduces impact noise
- Anti-slip
- No toxic or allergic components
- Does not generate static electricity
- Very realistic finish
- Does not need acclimatization
- Without joints up to 225 m²
- No CO₂ emissions in its manufacture
- Fireproof
- Wear resistant
- Without maintenance
- UV resistant
- Perfect use between 5°C and 40°C
- Suitable for babies
- Bacterial and fungi resistant
- Reusable
- Effortless
- Easy assembly
- Suitable for wall and floor surfaces
- Impact resistant
- Anti-glare technology
- Acoustically isolating
- Does not dilate
- Suitable for hydraulic underfloor heating
- Ideal for pets
- Resistant to pests
- Installation on any surface
- No works
- Quick assembly
